Amarex Featured in 15-year Anniversary Issue of the NSF International Journal

Germantown, MD, USA (February 24, 2021) – The just released Issue 48 of NSF International's Health Science Journal features contributions by Amarex Clinical Research, LLC: 1) a white paper on the latest innovations in exploratory oncology trial designs; and 2) the exit interview with Amarex's visiting scientist, Nary Woo, from the Korean Ministry of Food and Drug Safety (MFDS), concluding her yearlong U.S. training.

The white paper, "Oncology Clinical Trials: An Emerging Paradigm Shift in Study Design" explains the latest study designs for oncology trials involving master protocols that simultaneously evaluate multiple treatment modalities and/or multiple oncology subpopulations in a single study. Key features of master protocol designs including study conduct and statistical challenges are discussed.

In the exit interview, Nary Woo reports on her experiences following her year of immersion training in U.S. regulatory affairs and U.S. CRO operations. Ms. Woo is a Korean MFDS Scientific Reviewer who joined Amarex's Regulatory team in late 2019 and finished her training in October 2020.

This journal is available at <https://www.nsf.org/periodicals/health-sciences-journal/issue-48>.
